Maintenance, repair and overhaul

Meggitt aftermarket support is offered on products manufactured by Whittaker Controls, Meggitt Safety Systems, Dunlop Equipment, Serck Aviation, Avica, Meggitt Aerodynamics and Meggitt Silicone Products. Comprehensive maintenance, repair and overhaul services are offered from each manufacturing facility as well as three strategically placed locations around the world – North Hollywood, California; Coventry, England; and Singapore.

From the North Hollywood facility, which is home to Whittaker Controls, MRO services are offered on Dunlop Equipment, Serck Aviation and Whittaker Controls' products. They are FAA and EASA certified as well as ISO 9001, 14001, and AS9001 registered and certified. Whittaker Controls' products regulate pneumatic, hydraulic and fuel flows in aircraft systems. Their components have both airframe and engine applications and can be found on Boeing and Airbus manufactured commercial aircraft; regional, general aviation and business aircraft; aircraft turbine engines built by General Electric, Rolls-Royce and Pratt & Whitney; and a wide range of US and foreign military aircraft. Whittaker Controls' more than 60-year legacy is centered on its ability to engineer solutions for extreme aircraft and engine environmental conditions.

The Coventry and Birmingham facilities, home to Dunlop Equipment and Serck Aviation respectively, support the complete line of their products. Dunlop manufactures custom-engineered integrated fluid solutions for thermal management and air handling systems. These systems include aircraft turbine engine solenoid, bleed and regulating air control valves. Dunlop products are installed on both commercial and military aircraft platforms. Serck Aviation manufactures lightweight, high performance tubular and brazed, plate and fin heat exchangers which are specified on a variety of aircraft engines and airframes, as well as military land vehicles.

The Dunlop Singapore facility began by offering aftermarket support for Dunlop Equipment and Dunlop Aerospace Braking Systems products in the Asian and Australasian markets. They are certified by the FAA, CAAC, CAAS, DGAC, and EASA. This facility has become renowned for its extremely quick turnaround times, high quality workmanship, and extensive customer service. With the acquisition of Dunlop by Meggitt, the Singapore facility is poised to offer aftermarket support on a variety of Meggitt owned companies. The recent renovation and expansion of the facility will allow for the incorporation of these products and services.

These companies are recognized by their customers for their ability to respond to tight turnaround schedules while providing world class workmanship and customer service. The customer also has the assurance that the highest quality standards have been maintained through the use of OEM materials and workmanship. Turnaround time is enhanced by strong in-house engineering skills and proprietary in-house testing facilities. Engineering solutions for product improvement/modification are the cornerstone of each organization's continuous product improvement program. Their outstanding reputation for dedicated, experienced MRO service is backed by the legacy of their products that are installed on hundreds of commercial and military aircraft of all types.

On-site testing capabilities include high capacity pneumatic test facilities, hydraulic test stands and fuel test equipment. These facilities satisfy all of today's test requirements, and up-to-date computer data acquisition systems offer the flexibility to adapt to tomorrow's technical advances.
